8 kyu is the easiest, 6 is pretty challenging!! getting up to 4 or 3 kyu is a good longer term goal

Rubyquiz.com:

Solve problems then read solutions/explanations by experts.

This site no longer actively maintained, but quizzes and solutions are accessible.

These are ****advanced**** problems, often requiring you to code multiple classes, almost a mini application.

Paula has browsed through a few in the list. So far they aren't so good for quick group work, but might be fun for an extended paired/group project.

I'd recommend this as good site to practice reading and understanding Ruby code. There are often explanations or annotations given by the quiz author and/or solvers. Multiple solutions from different people are available to read!

Code challenges & puzzles list from StackExchange.com

Below are detailed contents of list at this link:
